

Tackling those Pesky Angles

Measure the section you need to add and cut fabric to this measurement. Allow an extra 1" on all sides. Position the fabric piece parallel to the foundation unit right side down. (This is how it will be sewn onto the foundation). Lay the ruler as shown and cut the angle. Your fabric is now at the correct angle to add. Flip over and position along the raw edge of the last section then stitch along the sewing line.
